<b>Table of Contents</b> .....	<b>2</b>
<b>1. Introduction</b> .....	<b>3</b>
<b>2. Pacing Guide</b> .....	<b>3</b>
2.1. Pacing Guide Keys .....	4
2.2. Semester 1 .....	5
2.3. Semester 2 .....	11

## 1. INTRODUCTION

Primary Resource: Ohio Department of Education Academic Standards and Learning Targets and Youngstown City Schools Pacing Guides

Adapted by: Adam Timmerman and Leslee Brewer

The following document provides a detailed layout of how an 8<sup>th</sup> grade math class can be taught. The pacing guide table provides information on each lesson, when a lesson should be taught, and the length of time each lesson will take.

## 2. PACING GUIDE

The intent of this course pacing guide is to provide a practical guide that educators can follow for a yearlong 8<sup>th</sup> grade math class. The pacing guide is based on Ohio Content Standards and Learning Targets. The content pacing guide provides the Domain from which the content comes. The percentage of questions from each Domain that will appear on the Ohio AIR State Test is also included as well as the Ohio Content Standard(s) and the Ohio Learning Target that each lesson covers. The title of each lesson, the order in which each lesson should be taught, and the amount of time each lesson should take is also given. Finally, a column is provided to allow for teacher notes regarding the effectiveness of changes a lesson might need, offering each teacher the opportunity to edit the document to fit their individual classroom needs.

## 2.1. PACING GUIDE KEYS

Table 1 provides a Key so teachers can gain a better understanding of the pacing guide that follow.

Table 1: Pacing Guide Format

Font Style	Description
Green	Critical Areas of Focus on State Testing
Black	Minor Areas of Focus on State Testing
<b>Bold</b>	Standard(s) covered
<u>Underline</u>	Percentage of questions from each Domain appearing on the Ohio AIR State Test

Table 2 provides a Key so teachers understand what percentage of questions are on the state test, what domain each unit falls into, as well as what standard is in each lesson and if it is a major or minor area for state testing.

Table 2: Pacing Guide

Percentage of Questions on State Test	Unit & Domain	Major Areas	Minor Areas
20% - 29%	<b>Unit 1</b> Expressions & Equations	8.EE.7.a / 8.EE.7b	
20% - 29%	<b>Unit 2</b> Functions	8.F.1 / 8.F.2 / 8.F.3 / 8.F.4 / 8.F.5	
20% - 29%	<b>Unit 3</b> Expressions & Equations	8.EE.5 / 8.EE.6 / 8.EE.7.b / 8.F.4	
20% - 25%	<b>Unit 4</b> The Number System / Expressions & Equations	8.EE.1 / 8.EE.2 / 8.EE.3 / 8.EE.4	8.NS.1 / 8.NS.2 / 7.NS.3
20% - 29%	<b>Unit 5</b> Expressions & Equations	8.EE.7.a / 8.EE.8a / 8.EE.8.b / 8.EE.8.c	
28% - 37%	<b>Unit 6</b> Geometry	8.EE.2 / 8.G.6 / 8.G.7 / 8.G.8	8.NS.2
28% - 37%	<b>Unit 7</b> Geometry	8.G.1.a / 8.G.1.b / 8.G.2 / 8.G.3 / 8.G.8	
28% - 37%	<b>Unit 8</b> Geometry	8.G.1.a / 8.G.1.b / 8.G.1.c / 8.G.2 / 8.G.3 / 8.G.4 / 8.G.5. / 8.EE.6	
28% - 37%	<b>Unit 9</b> Geometry		8.G.9
22% - 29%	<b>Unit 10</b> Statistics & Probability		8.SP.1 / 8.SP.2 / 8.SP.3 / 8.SP.4

## 2.2. SEMESTER 1

Domain	Standards	Learning Target	Lesson	Pacing	Teacher Notes
<b>Unit 1: Expressions &amp; Equations</b>  26 Days	<b>8.EE.7.a</b> <b>8.EE.7b</b>		<b>Pre-Test</b>	1 Day	
Expressions & Equations  26 Days  <u>Major Area</u>	<b>8. EE-7.a.</b> Solve linear equations in one variable. - Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$ , $a = a$ , or $a = b$ results (where $a$ and $b$ are different numbers).	<ul style="list-style-type: none"> <li>I can classify linear equations that have one solution, infinite solutions, and no solutions.</li> </ul>	<b>Domain 2: Lesson 1 - Linear Equations and the Distributive Property</b>	11 Days	
Expressions & Equations  26 Days  <u>Major Area</u>	<b>8. EE-7.b.</b> Solve linear equations in one variable. - Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.	<ul style="list-style-type: none"> <li>I can solve any linear equation with rational numbers.</li> </ul>	<b>Domain 2: Lesson 2 - Linear Equations and the Distributive Property</b>	12 Days	
<b>Unit 1: Expressions &amp; Equations</b>  26 Days	<b>8.EE.7.a</b> <b>8.EE.7b</b>		<b>Post-Test &amp; Summative Assessment</b>	2 Days	
<b>Unit 2: Functions</b>  16 Days	<b>8.F.1</b> <b>8.F.2</b> <b>8.F.3</b> <b>8.F.4</b>		<b>Pre-Test</b>	1 Day	

		<b>8.F.5</b>			
<i>Functions</i> 16 Days <u>Major Area</u>	<b>8. F-1.</b> Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.	<ul style="list-style-type: none"> <li>I can define and explain in my words what function is and how it relates to input/output tables at earlier grades.</li> <li>I can explain how the graph of a function relates to its set of ordered pairs.</li> </ul>	<b>Domain 3: Lesson 3 - Relations &amp; Functions</b>	3 Days	
<i>Functions</i> 16 Days <u>Major Area</u>	<b>8. F-2.</b> Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change	<ul style="list-style-type: none"> <li>I can compare the properties of two functions that are displayed in different ways (equation, graph, table, or words)</li> </ul>	<b>Domain 3: Lesson 4 - Graphs of Functions / Work with Linear Functions</b>	3 Days	
<i>Functions</i> 16 Days <u>Major Area</u>	<b>8. F-3.</b> Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points (1,1), (2,4) and (3,9), which are not on a straight line.	<ul style="list-style-type: none"> <li>I can rewrite linear equations in the form of <math>y = mx + b</math>.</li> <li>I can recognize when an equation is a linear function</li> <li>I can generate functions that are not linear and explain why they are not linear.</li> </ul>	<b>Domain 3: Lesson 5 - Functions and Slope-Intercept Form</b>	3 Days	
<i>Functions</i> 16 Days <u>Major Area</u>	<b>8. F-4.</b> Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.	<ul style="list-style-type: none"> <li>I can create an equation to model two quantities that are linear.</li> <li>I can determine the rate of change when given a linear relationship shown by a table or graph.</li> <li>I can determine the initial value when given a linear relationship shown by a table or graph.</li> <li>I can explain what the rate of change means when given a linear relationship in a real-world situation.</li> <li>I can explain what the initial value</li> </ul>	<b>Domain 3: Lesson 6 - Linear Models &amp; Multiple Representation</b>	2 Days	

		means when given a linear relationship in a real-world situation.			
<p><i>Functions</i></p> <p>16 Days</p> <p><u>Major Area</u></p>	<p><b>8. F-5.</b> Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.</p>	<ul style="list-style-type: none"> <li>I can describe where a graph is increasing, decreasing, constant, linear, and nonlinear.</li> <li>I can sketch a graph if I am told where and how it is increasing, decreasing, constant, linear, and nonlinear.</li> </ul>	<p><b>Domain 3: Lesson 7 -</b> Use Graphs of Functions to Solve Problems</p>	2 Days	
<p><b>Unit 2: Functions</b></p> <p>16 Days</p>	<p><b>8.F.1</b> <b>8.F.2</b> <b>8.F.3</b> <b>8.F.4</b> <b>8.F.5</b></p>		<p><b>Post-Test &amp; Summative Assessment</b></p>	2 Days	
<p><b>Unit 3: Expressions &amp; Equations</b></p> <p>26 Days</p>	<p><b>8.EE.5</b> <b>8.EE.6</b> <b>8.EE.7.b</b> <b>8.F.4</b></p>		<p><b>Pre-Test</b></p>	1 Day	
<p><i>Expressions &amp; Equations</i></p> <p>26 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-5.</b> Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed</p>	<ul style="list-style-type: none"> <li>I can explain proportional relationships with a graph.</li> <li>I can compare two proportional relationships when one is a graph and the other an equation.</li> </ul>	<p><b>Domain 2 &amp; 3: Lesson 8 -</b> Equations of a Line</p>	5 Days	
<p><i>Expressions &amp; Equations</i></p> <p>26 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-6.</b> Use similar triangles to explain why the slope <math>m</math> is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation <math>y = mx</math> for a line through the origin and the equation <math>y = mx + b</math> for a line intercepting the vertical axis at <math>b</math>.</p>	<ul style="list-style-type: none"> <li>I can explain the constant slope of a line using points on the line and similar triangles.</li> <li>I can determine the equation of a line given on a coordinate graph.</li> </ul>	<p><b>Domain 2 &amp; 3: Lesson 9 -</b> Slope / Linear Models &amp; Slope-Intercept Graphs</p>	10 Days	

<p><i>Expressions &amp; Equations</i></p> <p>26 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-7.b</b> Solve linear equations in one variable. - Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.</p>	<ul style="list-style-type: none"> <li>I can solve any linear equation with rational numbers.</li> </ul>	<p><b>Domain 2 &amp; 3:</b> <b>Lesson 10 -</b> Graphs in Point-Slope Form</p>	3 Days	
<p><i>Expressions &amp; Equations</i></p> <p>26 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-7.b</b> Solve linear equations in one variable. - Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.</p>	<ul style="list-style-type: none"> <li>I can solve any linear equation with rational numbers.</li> </ul>	<p><b>Domain 2 &amp; 3:</b> <b>Lesson 11 -</b> Graphs of Linear Equations in Two Variables</p>	3 Days	
<p><i>Expressions &amp; Equations</i></p> <p>26 Days</p> <p><u>Major Area</u></p>	<p><b>8. F-4.</b> Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.</p>	<ul style="list-style-type: none"> <li>I can create an equation to model two quantities that are linear.</li> <li>I can determine the rate of change when given a linear relationship shown by a table or graph.</li> <li>I can determine the initial value when given a linear relationship shown by a table or graph.</li> <li>I can explain what the rate of change means when given a linear relationship in a real-world situation.</li> <li>I can explain what the initial value means when given a linear relationship in a real-world situation.</li> </ul>	<p><b>Domain 2 &amp; 3:</b> <b>Lesson 12 -</b> Linear Functions</p>	2 Days	
<p><b>Unit 3:</b> <b>Expressions &amp; Equations</b></p> <p>26 Days</p>	<p><b>8.EE.5</b> <b>8.EE.6</b> <b>8.EE.7.b</b> <b>8.F.4</b></p>		<p><b>Post-Test &amp; Summative Assessment</b></p>	2 Days	
<p><b>Unit 4:</b> <b>The Number</b></p>	<p><b>8.NS.1</b> <b>8.NS.2</b></p>				

<p><b>System / Expressions &amp; Equations</b></p> <p>14 Days</p>	<p><b>7.NS.3</b>  <b>8.EE.1</b>  <b>8.EE.2</b>  <b>8.EE.3</b>  <b>8.EE.4</b></p>		<p><b>Pre-Test</b></p>	<p>1 Day</p>	
<p><i>The Number System / Expressions &amp; Equations</i></p> <p>14 Days</p> <p><u>Minor Area</u></p>	<p><b>8. NS-1.</b> Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion which repeats eventually into a rational number</p>	<ul style="list-style-type: none"> <li>I can explain the difference between rational and irrational numbers.</li> <li>I can identify and explain the decimal expansion for rational numbers.</li> </ul>	<p><b>Domain 1 &amp; 2: Lesson 13- Real Number System / Rational &amp; Irrational Numbers</b></p>	<p>2 Days</p>	
<p><i>The Number System / Expressions &amp; Equations</i></p> <p>- 14 Days</p> <p><u>Minor Area</u></p>	<p><b>8. NS-2.</b> Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., <math>\pi^2</math>). For example, by truncating the decimal expansion of <math>\sqrt{2}</math>, show that <math>\sqrt{2}</math> is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.</p> <p><b>7. NS-3.</b> Solve real-world and mathematical problems involving the four operations with rational numbers.</p>	<ul style="list-style-type: none"> <li>I can find the approximate value of an irrational numbers by a system of better approximations.</li> <li>I can locate the approximate the value of an irrational number on a number line.</li> <li>I can solve real-world problems involving the four operations and rational numbers</li> </ul>	<p><b>Domain 1 &amp; 2: Lesson 14 - Compare and Order Rational &amp; Irrational Numbers</b></p>	<p>2 Days</p>	
<p><i>The Number System / Expressions &amp; Equations</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-1.</b> Know and apply the properties of integer exponents to generate equivalent numerical expressions. For example, <math>3^2 \times 3^{-5} = 3^{-3} = (1/3)^3 = 1/27</math>.</p>	<ul style="list-style-type: none"> <li>I can simplify expressions with integer exponents</li> </ul>	<p><b>Domain 1 &amp; 2: Lesson 15 - Exponent Rules</b></p>	<p>2 Days</p>	
<p><i>The Number System / Expressions &amp; Equations</i></p>	<p><b>8. EE-2.</b> Use square root and cube root symbols to represent solutions to equations of the form <math>x^2 = p</math> and <math>x^3 = p</math>, where <math>p</math> is a positive rational number. Evaluate</p>	<ul style="list-style-type: none"> <li>I can solve simple equations involving squares and cubes.</li> <li>I can evaluate the square roots of</li> </ul>	<p><b>Domain 1 &amp; 2: Lesson 16 - Square Roots &amp;</b></p>		

<p><i>Equations</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p>square roots of small perfect squares and cube roots of small perfect cubes. Know that <math>\sqrt{2}</math> is irrational.</p>	<p>small perfect squares.</p> <ul style="list-style-type: none"> <li>I can evaluate the cube roots of small perfect cubes.</li> <li>I know radical 2 is irrational.</li> </ul>	<p>Cube Roots</p>	<p>2 Days</p>	
<p><i>The Number System / Expressions &amp; Equations</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-3.</b> Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. For example, estimate the population of the United States as <math>3 \times 10^8</math> and the population of the world as <math>7 \times 10^9</math>, and determine that the world population is more than 20 times larger.</p>	<ul style="list-style-type: none"> <li>I can express very large and small numbers in scientific notation.</li> <li>I can determine the proportional difference between scientific numbers.</li> </ul>	<p><b>Domain 1 &amp; 2: Lesson 17 - Scientific Notation</b></p>	<p>2 Days</p>	
<p><i>The Number System / Expressions &amp; Equations</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-4.</b> Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology.</p>	<ul style="list-style-type: none"> <li>I can add, subtract, multiply, and divide combinations of numbers in scientific notation.</li> <li>I can appropriately use scientific notations and units of measurement in real-world situations.</li> <li>I can explain scientific notation generated by technology.</li> </ul>	<p><b>Domain 1 &amp; 2: Lesson 18 - Solving Problems Using Scientific Notation</b></p>	<p>1 Day</p>	
<p><b>Unit 4:</b></p> <p><i>The Number System / Expressions &amp; Equations</i></p> <p>14 Days</p>	<p><b>8.NS.1</b></p> <p><b>8.NS.2</b></p> <p><b>7.NS.3</b></p> <p><b>8.EE.1</b></p> <p><b>8.EE.2</b></p> <p><b>8.EE.3</b></p> <p><b>8.EE.4</b></p>		<p><b>Post-Test &amp; Summative Assessment</b></p>	<p>2 Days</p>	

2.3. SEMESTER 2

Domain	Standards	Learning Target	Lesson	Pacing	Teacher Notes
<b>Unit 5: Expressions &amp; Equations</b>  12 Days	<b>8.EE.7.a</b> <b>8.EE.8a</b> <b>8.EE.8.b</b> <b>8.EE.8.c</b>		<b>Pre-Test</b>	1 Day	
<i>Expressions &amp; Equations</i>  12 Days  <u>Major Area</u>	<b>8. EE-7.a</b> Solve linear equations in one variable. - Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.	<ul style="list-style-type: none"> <li>I can solve any linear equation with rational numbers</li> </ul>	<b>Domain 1 &amp; 2: Lesson 19 - Linear Equations with Variables on Both Sides</b>	2 Days	
<i>Expressions &amp; Equations</i>  12 Days  <u>Major Area</u>	<b>8. EE-8.a</b> Analyze and solve pairs of simultaneous linear equations. - Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.	<ul style="list-style-type: none"> <li>I can explain how a solution to a pair of simultaneous equations relates to the intersection of their graphs.</li> </ul>	<b>Domain 1 &amp; 2: Lesson 20 - System of Equations Modeling / Graphing</b>	2 Days	
<i>Expressions &amp; Equations</i>  12 Days  <u>Major Area</u>	<b>8. EE-8.b</b> Analyze and solve pairs of simultaneous linear equations. - Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. For example, $3x + 2y = 5$ and $3x + 2y = 6$ have no solution because $3x + 2y$ cannot simultaneously be 5 and 6.	<ul style="list-style-type: none"> <li>I can solve a system of linear equations algebraically</li> <li>I can solve a system of linear equations graphically</li> <li>I can determine solutions or special conditions to simple linear simultaneous equations mentally</li> </ul>	<b>Domain 1 &amp; 2: Lesson 21 - Linear System Solving Using Substitution &amp; Elimination</b>	3 Days	
<i>Expressions &amp; Equations</i>  12 Days  <u>Major Area</u>	<b>8. EE-8.c</b> Analyze and solve pairs of simultaneous linear equations. - Solve real-world and mathematical problems leading to two linear equations in two variables. For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair	<ul style="list-style-type: none"> <li>I can solve real-world problems using simultaneous equations.</li> </ul>	<b>Domain 1 &amp; 2: Lesson 22 - Linear System Solving Using Linear Combinations</b>	2 Days	

<p><b>Unit 5: Expressions &amp; Equations</b></p> <p>12 Days</p>	<p><b>8.EE.7.a</b> <b>8.EE.8a</b> <b>8.EE.8.b</b> <b>8.EE.8.c</b></p>		<p><b>Post-Test &amp; Summative Assessment</b></p>	<p>2 Days</p>	
<p><b>Unit 6: Geometry</b></p> <p>12 Days</p>	<p><b>8.NS.2</b> <b>8.EE.2</b> <b>8.G.6</b> <b>8.G.7</b> <b>8.G.8</b></p>		<p><b>Pre-Test</b></p>	<p>1 Day</p>	
<p>Geometry</p> <p>12 Days</p> <p><u>Minor Area</u></p>	<p><b>8. NS-2.</b> Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., <math>\pi^2</math>). For example, by truncating the decimal expansion of <math>\sqrt{2}</math>, show that <math>\sqrt{2}</math> is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.</p>	<ul style="list-style-type: none"> <li>I can find the approximate value of an irrational numbers by a system of better approximations.</li> </ul>	<p><b>Domain 4: Lesson 23 - Approximations of Square &amp; Cube Roots</b></p>	<p>1 Day</p>	
<p>Geometry</p> <p>12 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-2.</b> Use square root and cube root symbols to represent solutions to equations of the form <math>x^2 = p</math> and <math>x^3 = p</math>, where <math>p</math> is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that <math>\sqrt{2}</math> is irrational.</p>	<ul style="list-style-type: none"> <li>I can solve simple equations involving squares and cubes.</li> </ul>	<p><b>Domain 4: Lesson 24 - Simplification and Operations with Radicals</b></p>	<p>2 Days</p>	
<p>Geometry</p> <p>12 Days</p> <p><u>Major Area</u></p>	<p><b>8. G-6.</b> Explain a proof of the Pythagorean Theorem and its converse.</p>	<ul style="list-style-type: none"> <li>I can explain at least one method of proof of the Pythagorean Theorem.</li> <li>I can explain a proof of the converse of the Pythagorean Theorem which says, if the square of one side of a triangle is equal to the sum of the squares of the other two sides, then the triangle is a right triangle.</li> </ul>	<p><b>Domain 4: Lesson 25 - Pythagorean Theorem</b></p>	<p>2 Days</p>	

Geometry 12 Days <u>Major Area</u>	<b>8. G-7.</b> Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.	<ul style="list-style-type: none"> <li>I can solve real-world problems using the Pythagorean Theorem.</li> </ul>	<b>Domain 4: Lesson 26 - Special Right Triangles</b>	2 Days	
Geometry 12 Days <u>Major Area</u>	<b>8. G-8.</b> Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.	<ul style="list-style-type: none"> <li>I can find the distance between two points on a coordinate grid.</li> </ul>	<b>Domain 4: Lesson 27 - Distance of the Coordinate Plane</b>	2 Days	
<b>Unit 6: Geometry</b> 12 Days	<b>8.NS.2</b> <b>8.EE.2</b> <b>8.G.6</b> <b>8.G.7</b> <b>8.G.8</b>		<b>Post-Test &amp; Summative Assessment</b>	2 Days	
<b>Unit 7: Geometry</b> 15 Days	<b>8.G.1.a</b> <b>8.G.1.b</b> <b>8.G.2</b> <b>8.G.3</b> <b>8.G.8</b>		<b>Pre-Test</b>	1 Day	
Geometry 15 Days <u>Major Area</u>	<b>8. G-1.a</b> Verify experimentally the properties of rotations, reflections, and translations: - Lines are taken to lines, and line segments to line segments of the same length.	<ul style="list-style-type: none"> <li>I can demonstrate and explain what happens to a line when it is rotated, reflected, and translated by various amounts.</li> <li>I can demonstrate and explain what happens to a line segment when it is rotated, reflected, and translated by various amounts.</li> </ul>	<b>Domain 4: Lesson 28 - Translations &amp; Rotations of Plane Figures</b>	3 Day	
Geometry 15 Days <u>Major Area</u>	<b>8. G-1.b</b> Verify experimentally the properties of rotations, reflections, and translations: b. Angles are taken to angles of the same measure.	<ul style="list-style-type: none"> <li>I can demonstrate and explain what happen to a angle when it is rotated, reflected, and translated by various amounts.</li> </ul>	<b>Domain 4: Lesson 29 - Reflections of Plane Figures</b>	3 Days	
Geometry	<b>8. G-2.</b> Understand that a two-dimensional figure is	<ul style="list-style-type: none"> <li>I can define congruence in terms</li> </ul>	<b>Domain 4:</b>		

15 Days <i>Major Area</i>	congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.	of rotating, reflecting, or translating the first to obtain the second. <ul style="list-style-type: none"> <li>I can specifically name the rotation, reflection, or translation of one 2-D shape necessary to obtain the second congruent figure.</li> </ul>	<b>Lesson 30 - Geometric Transformations</b>	3 Days	
Geometry 15 Days <i>Major Area</i>	<b>8. G-3.</b> Describe the effect of dilations, translations, rotations, and reflections on two dimensional figures using coordinates. <b>8. G-8.</b> Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.	<ul style="list-style-type: none"> <li>I can explain how a translation changes a figure on a coordinate graph.</li> <li>I can find the distance between two points on a coordinate grid.</li> </ul>	<b>Domain 4: Lesson 31 - Similar Triangles / Applying the Pythagorean Theorem</b>	3 Days

Geometry 14 Days <i>Major Area</i>	<b>8. G-1.a</b> Verify experimentally the properties of rotations, reflections, and translations: - Lines are taken to lines, and line segments to line segments of the same length. <b>8. G-1.b</b> Verify experimentally the properties of rotations, reflections, and translations: b. Angles are taken to angles of the same measure. <b>8. G-1.c</b> Verify experimentally the properties of	<ul style="list-style-type: none"> <li>I can specifically name the rotation, reflection, or translation of one 2-D shape necessary to obtain the second congruent figure.</li> <li>I can demonstrate and explain what happen to parallel lines when they are rotated, reflected,</li> </ul>	<b>Domain 4: Lesson 32 - Dilations of Plane Figures</b>	3 Days	

	<p>rotations, reflections, and translations: c. Parallel lines are taken to parallel lines.</p> <p><b>8. G-2.</b> Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.</p>	<p>and translated by various amounts.</p>			
<p><i>Geometry</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p><b>8. G-3.</b> Describe the effect of dilations, translations, rotations, and reflections on two dimensional figures using coordinates.</p> <p><b>8.G-4.</b> Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.</p>	<ul style="list-style-type: none"> <li>I can explain how two geometric figures are similar when you can dilate, rotate or reflect or translate the first to obtain the second.</li> <li>I can specifically name the dilation, rotation or reflection or translation of one geometric figure necessary to obtain the second similar figure.</li> </ul>	<p><b>Domain 4:</b> <b>Lesson 33 -</b> Similar Triangles</p>	2 Days	
<p><i>Geometry</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p><b>8. G-5.</b> Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle criterion for similarity of triangles. For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so.</p>	<ul style="list-style-type: none"> <li>I can explain why the interior angles of a triangle always add to 180.</li> <li>I can explain the measures of the exterior angles of a triangle and why they add to 360.</li> <li>I can explain the relationship between all the angles formed by parallel lines cut by a transversal.</li> <li>I can explain the relationship between all the angles of two similar triangles.</li> </ul>	<p><b>Domain 4:</b> <b>Lesson 34 -</b> Lines Cut by a Transversal / Parallel and Perpendicular Lines</p>	3 Days	
<p><i>Geometry</i></p> <p>14 Days</p> <p><u>Major Area</u></p>	<p><b>8. EE-6.</b> Use similar triangles to explain why the slope <math>m</math> is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation <math>y = mx</math> for a line through the origin and the equation <math>y = mx + b</math> for a line intercepting the vertical axis at <math>b</math>.</p>	<ul style="list-style-type: none"> <li>I can explain the constant slope of a line using points on the line and similar triangles.</li> <li>I can determine the equation of a line given on a coordinate graph.</li> </ul>	<p><b>Domain 4:</b> <b>Lesson 35 -</b> Angles &amp; Triangles</p>	3 Days	

<b>Unit 8: Geometry</b>  14 Days	<b>8.G.1.a 8.G.1.b 8.G.1.c 8.G.2 8.G.3 8.G.4 8.G.5. 8.EE.6</b>		<b>Post-Test &amp; Summative Assessment</b>	2 Days	
<b>Unit 9: Geometry</b>  9 Days	<b>8.G.9</b>		<b>Pre-Test</b>	1 Day	
<i>Geometry</i>  9 Days  <u>Minor Area</u>	<b>8. G-9.</b> Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.	<ul style="list-style-type: none"> <li>I can solve real-world problems involving the volumes of cones, cylinders, or spheres.</li> </ul>	<b>Domain 4: Lesson 36 - Surface Area of Cylinders and Spheres</b>	4 Days	
<i>Geometry</i>  9 Days  <u>Minor Area</u>	<b>8. G-9.</b> Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.	<ul style="list-style-type: none"> <li>I can find the volume of any cone, cylinder, or sphere.</li> </ul>	<b>Domain 4: Lesson 36 - Volume of Cylinders, Cones, and Spheres</b>	2 Days	
<b>Unit 9: Geometry</b>  9 Days	<b>8.G.9</b>		<b>Post-Test &amp; Summative Assessment</b>	2 Days	
<b>Unit 10: Statistics &amp; Probability</b>  9 Days	<b>8.SP.1 8.SP.2 8.SP.3 8.SP.4</b>		<b>Pre-Test</b>	1 Day	
<i>Statistics &amp;</i>	<b>8. SP-1.</b> Construct and interpret scatter plots for	<ul style="list-style-type: none"> <li>I can create a scatter plot with</li> </ul>	<b>Domain 5:</b>		

<p><i>Probability</i></p> <p>9 Days</p> <p><u>Minor Area</u></p>	<p>bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.</p>	<p>data involving two variables (bivariate data).</p> <ul style="list-style-type: none"> <li>I can interpret a scatter plot by explaining patterns such as clustering, outliers, positive and negative patterns, linear patterns, and nonlinear patterns.</li> </ul>	<p><b>Lesson 37 - Scattered Plots</b></p>	<p>2 Days</p>	
<p><i>Statistics &amp; Probability</i></p> <p>9 Days</p> <p><u>Minor Area</u></p>	<p><b>8. SP-2.</b> Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.</p>	<ul style="list-style-type: none"> <li>I can identify linear patterns in a scatter plot and can estimate a straight line that fits the pattern.</li> <li>I can judge the quality of a line fitting a scatter plot by judging the closeness of the points to the line.</li> </ul>	<p><b>Domain 5: Lesson 38 - Trend Lines or Lines of Best Fit</b></p>	<p>1 Day</p>	
<p><i>Statistics &amp; Probability</i></p> <p>9 Days</p> <p><u>Minor Area</u></p>	<p><b>8. SP-3.</b> Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr. as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height</p>	<ul style="list-style-type: none"> <li>I can create a linear model of a problem and describe how the slope and/or intercepts relate to the context of the problem.</li> </ul>	<p><b>Domain 5: Lesson 39 - Interpret Linear Models</b></p>	<p>2 Days</p>	
<p><i>Statistics &amp; Probability</i></p> <p>9 Days</p> <p><u>Minor Area</u></p>	<p><b>8. SP-4.</b> Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores at home?</p>	<ul style="list-style-type: none"> <li>I can create a two-way table on data with two variables.</li> <li>I can recognize patterns of association with categorical data.</li> <li>I can use the relative frequencies to find possible associations between the bivariate data.</li> </ul>	<p><b>Domain 5: Lesson 40 - Patterns in Data</b></p>	<p>1 Day</p>	
<p><b>Unit 10: Statistics &amp;</b></p>	<p><b>8.SP.1</b> <b>8.SP.2</b></p>		<p><b>Post-Test &amp; Summative</b></p>	<p>2 Days</p>	

<b>Probability</b> 9 Days	<b>8.SP.3</b> <b>8.SP.4</b>		<b>Assessment</b>
